PROFESSIONAL SUMMARY

Associate Software Engineer with nearly 3 years of experience in cloud engineering, Python automation, and enterprise application support within the insurance domain. AWS Certified Developer – Associate with experience in designing AWS-based cloud solutions, developing ETL pipelines, building REST APIs using FastAPI, and implementing cloud monitoring with Amazon CloudWatch. Skilled in Python development, serverless architectures, infrastructure automation, and production support. Passionate about building scalable cloud-native applications and continuously learning modern AWS technologies.

TECHNICAL SKILLS

Cloud Services:	AWS EC2, Amazon S3, AWS Lambda, IAM, API Gateway, Amazon CloudWatch, Amazon SNS, Amazon Redshift, Amazon RDS, AWS Glue, Amazon VPC
Programming:	Python, Object-Oriented Programming (OOP), Data Structures & Algorithms (DSA)
Backend Development:	FastAPI, REST APIs, Microservices, Serverless Architecture
DevOps & Tools:	Terraform, Docker, Git, GitHub, GitHub Actions, CI/CD Pipelines
Operating Systems:	Linux, Windows

PROFESSIONAL EXPERIENCE

Accenture — Associate Software Engineer

November 2023 – Present | Chennai, India

Project: State Farm Insurance

- **Cloud Architecture Design:** Designed and documented an AWS-based architecture for XML data ingestion, transformation, storage, monitoring, and API integration with a focus on scalability, security, and operational reliability; contributed to secure cloud-native workflows.
- **ETL Pipeline Development:** Developed automated ETL pipelines using AWS Glue, Amazon S3, and Python to ingest XML datasets, validate business rules, transform data, and load processed datasets into Amazon Redshift; implemented reusable validation and transformation logic.
- **Backend API Development:** Developed REST APIs using FastAPI and implemented serverless backend services using AWS Lambda and API Gateway to securely expose processed enterprise data.
- **Cloud Infrastructure & Monitoring:** Configured and validated AWS resources (S3, IAM, Lambda, API Gateway, SNS, Redshift, RDS, CloudWatch); implemented dashboards, structured logging, and monitoring metrics to improve application observability.
- **Automation & Production Support:** Developed Python automation scripts to reduce repetitive tasks; performed impact analysis, root cause analysis, technical design discussions, deployment validation, and post-deployment documentation following Agile methodologies.

PROJECTS

HiveMind – Enterprise Agentic AI Knowledge Platform

Python, FastAPI, AWS, Docker, REST APIs, RAG

- Designed an AI-powered enterprise knowledge platform using Digital Twins and Agentic AI concepts to preserve organizational knowledge; developed a multi-agent architecture to retrieve information from documentation, source code repositories, and engineering bases.
- Designed a Retrieval-Augmented Generation (RAG) workflow for context-aware queries; built scalable backend REST APIs using Python, FastAPI, AWS services, and Docker.

WhatsApp Bulk Messaging Automation

Python, Selenium, Docker, GitHub Actions

- Developed a Python automation solution using Selenium WebDriver with Excel-based contact processing, retry mechanisms, logging, configuration management, exception handling, Docker containerization, and GitHub Actions CI/CD.

CERTIFICATIONS

- AWS Certified Developer – Associate
- AWS Certified Cloud Practitioner
- GitHub Copilot Certification

EDUCATION

Bharath University, Chennai

Chennai, India

Bachelor of Technology (B.Tech) – Computer Science and Engineering | **CGPA:** 8.67 / 10.0
